\title{The IF community}
\author{Daniel Allington}
\maketitle
\section{A past that it could not transcend}
In a certain sense, the IF community at the time of data collection
was defined by a past that it could not (and would not want to)
transcend: as one well-regarded IF producer stated in interview, 'It's
astonishing, going back to the Infocom works, how much was done right
the first time'. In this, the IF community --- like other retrogaming
communities --- appears to resemble those communities of online music
fans that are focused on lost 'scenes'
\parencite[see][bennett_2002], and still more so, the
geographically-dispersed adherents of formerly-popular genres of music
that have entered what Lena and Peterson
\parencite*{lena_peterson_2008} call a 'traditionalist' phase.
Traditionalist musical genres provide parallels with retrogaming
scenes such as IF, in that the aim of the communities that value them
is 'to preserve a genre's \ldots heritage and inculcate the rising
generation of devotees in the \ldots techniques, history, and rituals
of the genre' \parencite[706]{lena_peterson_2008}.

Do not modify LaTeX sources Convert Office 2003/2007/2010 to LaTeX (pdfTeX) format and editable LaTeX files What is LaTeX? It is a programmable typesetting language which is originally derived from the standard TeX typesetting language. LaTeX is derived from TeX but is extended in many ways and contains many of TeX's most useful features. LaTeX is derived from a version of TeX designed to process documents for US typesetting conventions. As a result, LaTeX's features focus more on mathematical symbols and equations. LaTeX produces higher-quality typeset pages than TeX because it more closely corresponds to human-readable form. LaTeX uses the traditional Latin alphabet to typeset text, though many letters have non-Latin forms in some fonts. Because LaTeX uses LaTeX, it can also be used to produce other types of media, such as CD-ROM, paper-based books, and so on. This file has two parts, one for the.txt source and one for the.tex file. The.txt part is what you are looking for. The.tex part is just to provide an example of how to put the latex code in the document. ** 82157476af
